Software Requirements

- Stata (code was last run with verion 15)
- the program “0_setup.do” will install dependencies locally, and should be run once.

Description of programs

- Program doAll.do will execute all setup programs, cleaning and analysis.

Memory and Runtime Requirements

The code was last run on a **4-core Intel workstation with 16 GB of RAM, 1 TB of fast local storage**. Computation took 5 hours.

Instructions

1. Run programs/00_setup.do, which will create all output directories.
2. Download the data files referenced above. Each should be stored in the prepared subdirectories of data/, in the format that you download them in.
3. Run the programs in /01_dataprep.
 - These programs were last run at various times in 2023.
 - Order does not matter, all programs can be run in parallel, if needed.
 - programs/01_dataprep/doAll.do will run them all in sequence, which should take about X hours.
4. Run the program programs/02_analysis/master.do. If running programs individually, note that ORDER IS IMPORTANT. The programs were last run top to bottom on December 31, 2023.
5. Run the program programs/03_appendix/doAll-appendix.do. The programs were last run top to bottom on December 31, 2023.
